## Education

---

**New York University** | New York City, New York (9/2016 – 12/2019)

- **Major:** Computer Science, Bachelor of Science
- **Minor:** Mathematics
- **Cumulative GPA:** 3.51

## Experience

---

**Software Engineer at American Express** | New York, New York (2/2020 – Present)

**Full Stack Intern at INFOLynx** | Teaneck, New Jersey (5/2019 – 12/2019)

- Implemented flexible JavaScript components to decrease the time taken to build web pages.
- Utilized Leaflet to create a map component that shows locations in real time.
- Deployed AWS Lambda functions, such as database lookups and location updates via text with Nexmo, MongoDB, and Mongoose. API requests were tested using Postman.
- Redesigned the database with the Senior Developer, resulting in lowering Lambda runtimes by 30%.
- Set up a file upload feature by hooking up AWS Lambda and S3 to a JavaScript component.

**Software Contractor at CTFd** | New York, New York (1/2019 – 2/2019)

- Created and integrated templates for DropBox CTF's theme with CTFd's core theme using Jinja.
- Turned web and cryptography vulnerabilities into CTF challenges by hosting web applications on Linux servers.
- Delivered containerized CTF challenges to the Technology Student Association.
- Combined prior knowledge of web development with Docker to build light and portable web applications.

**Application Development Intern at Draft.Fish** | Campbell, California (6/2018 – 8/2018)

- Developed the MVP of an auto-scheduling to-do iOS application.
- Laid out and built the foundation of the application in Swift.
- Worked in a Scrum process to ensure efficient communication between engineers and customers.

**Member of the OSIRIS Security Lab** | New York, New York (10/2018 – Present)

- Posted a write-up of an AES encryption challenge on the OSIRIS blog.
- Contribute to the NYUSEC team by playing in weekly CTF events.
- Learn about and exploit security vulnerabilities through OSIRIS seminars and Hack Nights.

## Projects

---

**Indra** | Web Application

- An agent-based modeling system, written in Python, with a non-programming friendly GUI.
- Developing React components and cleaning up the existing code base using DevOps practices.

**League of Data** | Web Application

- Displays the best combination of playable characters from the game League of Legends.
- Utilized Riot Games' API to store data on a MySQL instance on AWS.

**Number Recognition** | Python Script

- Neural network that can recognize digits 0 - 4 from the MNIST data set of handwritten numbers.
- Implemented back propagation with one hidden layer.

**Secret Memo** | Python Script

- Creates password protected text files that can only be accessed through the shell.
- Encrypted files and passwords with a modified Caesar cipher and sha512 hashing.

## Technical Skills

---

**Proficient in** Python, C/C++, Java, JavaScript, jQuery, NodeJS, React, npm, JSON, Jest, HTML, CSS, Bootstrap, SASS, MongoDB, Mongoose, SQL, AWS (Lambda, S3, API Gateway), Git, Linux (Ubuntu), Docker, Postman, Jira

**Familiar with** Ruby, R, C#, Redux, PHP, Flask, Jinja, Nginx, AWS DynamoDB, Swift, Android Studio
